ABOUT THIS REPORT

The ForeSee E-Government Satisfaction Index is a comprehensive reflection of the citizen experience with federal government websites, and it serves as a critical checkpoint for evaluating the success and performance of the federal government’s online initiatives. More than 250,000 responses were collected across the federal government websites for the quarter measured in this Index. This demonstrates that citizens are willing to share their voices to help agencies and departments improve. The use of the ForeSee methodology and technology then enables agency leaders to determine which website and mobile site and app improvements will have the greatest impact on future usage and recommendations.
MEASURE TO IMPROVE PERFORMANCE

For more than 20 years, since the enactment of the Government Performance and Results Act of 1993 (GPRA), which required federal agencies to set goals, measure performance and publish plans for improvement, the federal government has been grappling with tactics and strategies to improve the customer service delivered to citizens. Over that period, three administrations have tried to get their arms wrapped around the ideas and concepts of performance improvement. As a result, many of this report’s readers are in the position of being held accountable for the steps they will take to improve the overall citizen (“customer”) experience.

So what is really meant by performance? Being in the Ann Arbor area and close to Detroit, I have to throw in the car analogy. Performance is often measured by what happened in the past, our view through the rearview mirror. In contrast, performance improvement comes from leveraging indicators to steer where we are going.

In a recent discussion with Michael Messinger, former Senior Advisor to the Director of the Voice of America and Performance Manager working for the Associate Director for Performance at the Office of Management and Budget, he told me, “Too many agency managers are focused on outputs versus outcomes. The outputs are typically from the organization’s point of view, often answering the question, how many? That’s bean counting. When leaders focus on the desired outcomes of a customer experience and what’s driving the satisfaction of that experience, they have a better idea of where to invest limited time, money and resources.”

In last quarter’s ForeSee E-Government Satisfaction Index, I outlined seven steps to a successful customer service effort. As a refresher, the seven steps outlined were:

1. Identify Who Your Customers Are
2. Actively Listen to Your Customers
3. Follow Your Customer’s Journey
4. Establish Customer Service Standards
5. Gain Internal Adoption
6. Measure
7. Champion Customer Experience Insights into Action

For this report, I want to discuss #6: Measure. Looking back at the Total Quality Management (TQM) days, you cannot manage what you do not measure. And since this is a commentary on the status of e-government, I want to discuss the measurement of digital channels.
For years, ForeSee’s research has revealed that citizens want to get information from their government through digital channels. Reasons include 24x7x365 availability, consistency of information, convenience and accessing information anytime from any device. For the government, a big benefit is the cost-savings in delivering information more efficiently online instead of through a contact center or branch office.

Because the term “performance measurement” can be used loosely, it’s important to understand how to truly measure a digital channel experience. What it comes down to is finding the proper measurement technology to deliver intelligent information that allows directors and managers to make the right decisions that will improve their entities’ status with the American people and earn the necessary funding to excel.

Many times when visiting with agency leaders and digital managers, I find that the discussions center on feedback and surveys to get visitors’ opinions. Herein lies the problem: There sometimes is a misconception about asking citizens to provide feedback through an opt-in mechanism and measuring the actual customer experience. There is a critical difference between feedback and measurement, and it really comes down to being reactive versus proactive.

Feedback is necessary and important and can do some good because it offers some insights you can and should react to (broken links, images not rendering, missing pages, etc.). However, it’s often easier to react to complaints than it is to proactively identify and measure big-picture needs. ForeSee data consistently shows that people are more likely to speak up when they have a bad experience, less likely when they have a good experience and hardly ever when they’re somewhere in the middle.

This means that a silent majority is going unheard. This expansive group can quietly undermine an organization’s online performance if its expectations and needs, the basis of customer satisfaction, are not met.

With feedback, you can certainly identify some of the major issues going on and identify some of the successes as well. The problem comes when you try to use feedback (and feedback alone) to manage your priorities. It then becomes a matter of managing to the ends of the spectrum, where the angry squeaky wheels and die-hard loyalists start dictating strategies, rather than the middle—the masses. On the other hand, the voice of the masses, if listened to, can direct agency leaders to make informed decisions that will make their sites and apps more citizen-centric.

Being proactive is really essential if government agencies truly want to increase performance levels. If they wait for feedback, they run the risk of losing engagement with and the trust of citizens, because their expectations and needs are not being met.

Budgets are often an issue that results in digital managers turning to simple survey solutions to just ask a few questions to citizens about a particular experience. The use of a simplistic survey also has its place in the digital measurement ecosystem, especially when you want to get quick directional information about a new program or a recent event. The concern is when managers are using a short, simple survey as a proxy for true measurement. Often, shorter surveys don’t provide actionable data that helps managers and senior leadership improve citizen engagement.
Using a scientific and predictive survey technology is an essential step in measuring the citizen experience. It’s critical to:

» Take steps to ensure that recipients of the survey are as representative as possible. This is the first step toward having a useful system of metrics.

» Understand what drives citizen satisfaction and what the likely outcome is from the online experience (participate in the future, use as a primary source, trust, return, recommend, etc.).

» Understand the relationship between the drivers of satisfaction, overall satisfaction, future behaviors and financial success. It is great to understand what happened yesterday and what is happening today, but it’s essential to know what improvements to make and what impact they are likely to have on tomorrow’s success. This is not an easy task, but it is the key to turning voice of citizen into actionable information.

With more and more satisfaction “methodologies” sprouting up every day, it is important to keep in mind that simple, single-item measures lack the reliability and sensitivity for making improvements that multi-item measures deliver. Although simple survey tactics are easy to implement and administer, they are not suitable for measuring multifaceted attitudinal constructs needed to make real improvements on citizens’ experiences.

Using a credible, reliable, precise, accurate, actionable and predictive methodology can show agency managers how their digital channels are performing in the eyes of citizens. Better yet, it prescribes where improvements should be made and illustrates the likely outcomes those improvements will yield before limited time, money and resources are allocated to those efforts.

With stringent budgets and fragile citizen sentiment, it’s imperative that federal government agencies measure correctly and continuously with a proven analytics methodology to gain the actionable insights needed to improve and succeed in the eyes of the American people.

E-GOVERNMENT DOWN SLIGHTLY

The first ForeSee E-Government Satisfaction Index for 2015 dropped slightly, coming in with an aggregate score of 74.7 versus 75.1 in Q4 2014. This is the 47th consecutive quarter that ForeSee has reported on the state of e-government, beginning in the third quarter of 2003.

ForeSee measures satisfaction on a 0–100 scale, with scores 80 and above recognized as the threshold of excellence (highly satisfied visitors) and scores below 70 revealing much room for improvement (dissatisfied). ForeSee customers have the ability to compare how they are doing relative to their peers and, most important, how their channels are performing over time. Scores in this quarter’s index range from 55 to 90. We often applaud the efforts of the high-scoring sites, but we should recognize all agencies and departments for being sensitive to the fact that the customer experience is more important than ever before and that measurement is the first step toward improvement.
ForeSee measures the digital experience for nearly 300 web and mobile sites. The E-Government Satisfaction Index is a measurement of more than 100 sites whose leaders volunteer to be transparent and share their scores. Some additional details on this quarter’s index include the following:

» Citizens will provide their opinion. More than 250,000 responses were collected for this first-quarter Index. This demonstrates that citizens are willing and able to provide feedback on government websites to help agencies and departments, with the use of ForeSee’s technology, to determine which site improvements will have the greatest impact on future usage and recommendations.

» E-government outperforms overall government in citizen satisfaction. Average citizen satisfaction with e-government is 74.7 versus 64.4 for overall government, according to the ACSI Federal Government Report 2014.*

» Highlighting the sites with stellar performance, Social Security Administration once again leads the pack. Extra Help with Medicare Prescription Drug Plan Costs (socialsecurity.gov/i1020) and SSA Retirement Estimator (ssa.gov/estimator) both came in with a 90 for the quarter.

» SSA is not the only organization meeting or exceeding the excellence threshold. Thirty sites (30%) have scores of 80 or higher.

» Top gainers for the quarter include Office of Justice Programs (ojp.gov), Disability.gov from Department of Labor, National Institute of Dental and Craniofacial Research, and U.S. Mint Online Catalog and main website.

**WHY DOES SATISFACTION MATTER?**

If agencies can deliver a satisfactory experience, the likelihood of desired outcomes is increased. For example, for this quarter’s index, highly satisfied website visitors were 84% more likely to use the website as a primary resource (versus a more costly channel like the contact center) and 88% more likely to put their trust behind the agency. For mobile, those who were highly satisfied with their experience were 62% more likely to return to the site or app and a whopping 93% more likely to recommend the site or app!

If you’re responsible for the digital channel, you’re probably interested in what’s driving satisfaction. Navigation and search are top drivers of satisfaction in this quarter’s index, followed closely by functionality, look and feel, and online transparency. It’s important to note that online transparency (providing thorough, easy-to-find information on a site) has been proven to be a driver of increased trust in the agency. Each site is different, so it’s key to prioritize improvements that will have the greatest impact on satisfaction for your site in order to drive the outcomes your organization desires.

Thank you for taking the time to review the ForeSee E-Government Index for this first quarter of 2015. At ForeSee, we continue to be committed to federal government organizations in their continued efforts to deliver customer service excellence.

Best,

Dave Lewan

THE FORESEE E-GOVERNMENT SATISFACTION INDEX (Q1 2015)

HOW E-GOVERNMENT IS PERFORMING OVERALL

ForeSee has been measuring e-government since the third quarter of 2003, when the average score was 70. The lowest the score has been during this time is 69, which occurred in the fourth quarter of 2003.

Figure 1 provides a summary of e-government customer experience performance for the most recent 12 months, as measured by the ForeSee Satisfaction Index.

TOP Gainers

Anytime a federal government department, agency or program website shows significant improvement in satisfaction (three points or more), it should be noted as a success, as it is sometimes difficult to keep pace with ever-changing citizen expectations. These organizations are definitely doing something right. Other organizations, whether in the same category or not, should take note of how they are achieving this success.

Figure 3 shows the websites that demonstrated significant increases in citizen satisfaction since the last quarter.

SATISFACTION BY WEBSITE FUNCTIONAL CATEGORY

In this report, federal government websites are organized by both functional category and organizational structure to allow for benchmarking against peers. The functional website categories include: e-commerce and transactional, news and information, portals and department main websites, and career and recruitment.

Since missions can vary greatly by category, it is useful to benchmark government websites against other sites in the same category, in addition to comparing scores against the overall aggregate average. To provide the most accurate and precise data, the ForeSee standard requires that a category consist of at least five websites before an average is calculated. Because the career and recruitment category consists only of three websites, an average isn’t calculated for it.

Federal Career and Recruitment Websites

To provide the most accurate and precise data, the ForeSee standard requires that a category consist of at least five websites before an average is calculated. Because this category consists only of four websites, an average isn’t calculated.

SATISFACTION WITH MOBILE SITES AND APPS

With more and more citizens wanting to gain information using mobile devices to access the government’s digital channels, the federal government and ForeSee launched the Mobile Federal Government Benchmark in the fourth quarter of 2013.

Figure 8 shows the average aggregate Satisfaction score for the government’s mobile sites and apps for the last 12 months, as well as how the scores from this relatively new index compare with scores from other indexes.

#### Q1 2015 Scores

- ForeSee Mobile Fed Gov Benchmark: 79
- ForeSee E-Gov Sat Index Q1 2015: 75
- ForeSee Website Index: 68
- ForeSee Mobile Benchmark: 38
- ForeSee Mobile Content Benchmark (Public/Private): 38
WHY SATISFACTION MATTERS

When the ForeSee customer experience measurement methodology is used, satisfaction has been shown to have a direct impact on behavior. Every quarter, this Index compares highly satisfied visitors and users (with Satisfaction scores of 80 or higher) to less-satisfied website visitors and mobile users (with Satisfaction scores of 69 or lower) and calculates likelihood scores that indicate actions citizens may take in the future.

For example, Figure 9 shows the range of Satisfaction this quarter for each measured future behavior. Here, a “Recommend Site” likelihood score of 103% indicates that a highly satisfied website visitor is 103% more likely than a less-satisfied visitor to recommend the website.

FIGURE 9

</tbody>
</table>
If federal government agencies focus on improving the priority areas for their websites and mobile sites and apps, citizen satisfaction should also improve.

ForeSee also helps the government measure a number of elements, or drivers, of satisfaction. Although there are variations in the set of elements that are relevant to each website (and fewer in general for mobile), the most common elements for websites are: Navigation, Search, Functionality, Look and Feel, Online Transparency, Site Performance and Content.

By measuring these elements, federal organizations can pinpoint and prioritize areas of improvement from the citizens’ perspective, which leads to increased satisfaction. Figure 10 shows the priority elements identified in the most recent Index.

WHY GOVERNMENT AGENCIES RELY ON FORESEE

Today, there are more ways than ever for the public sector to interact with citizens. In particular, websites—and more recently, mobile sites and apps—are helping federal departments and agencies and state and local governments increase transparency and deliver information and services more cost-effectively. But with constantly evolving citizen expectations, it’s difficult to know where to invest often-limited resources to create a better citizen experience and a more effective government.

ForeSee’s predictive customer experience analytics help leaders understand citizen satisfaction, from the citizen perspective; quantify the impact each element of the experience has on satisfaction and future behaviors; and understand where to focus resources for the best return.
ABOUT THE AUTHOR

Dave Lewan is responsible for managing the organization focused on the public sector, including federal and state government departments and agencies, non-profit organizations, associations and higher education institutions. He is charged with defining strategy and leveraging internal resources to initiate new business opportunities while delivering to existing ForeSee public-sector clients. Dave is also responsible for ForeSee's Canadian business and cxMeasure for Stores in the private sector. Over the past 25 years, Dave has led organizations in a number of different areas including sales, marketing, product management, operations and technology. Prior to joining ForeSee in 2009, Dave held leadership roles at ADP, SalesLogix, Ultimate Software and Ceridian. Dave graduated from the University of Minnesota with a degree in speech communications.

ABOUT FORESEE

ForeSee, an Answers solution, continuously measures satisfaction with the customer experience across customer touch points and delivers critical insights on where to prioritize improvements for maximum impact. Because ForeSee’s superior technology and proven methodology connect the customer experience to the bottom line, executives and agency managers are able to drive future success by confidently optimizing the efforts that will achieve organizational and mission objectives. The result is better efficiencies for organizations and a better experience for constituents. Visit www.answers.com/foresee for customer experience solutions.
